

Free Shower Glass Maintenance Checklist for UAE Bathrooms

CleanLivingUAE.com | Practical Cleaning Systems for Everyday UAE Living

Use this checklist to keep shower glass spot-free and prevent hard water buildup in UAE bathrooms.

Daily Shower Squeegee Checklist

- After every shower, squeegee all glass panels from top to bottom
- Overlap each horizontal stroke slightly to avoid missed strips
- Wipe the bottom glass edge with a dry microfiber cloth
- Rinse the squeegee blade under the tap after use
- Hang squeegee with blade facing down to drain
- Run bathroom extractor fan for at least 10 minutes
- Leave bathroom door slightly open if ventilation is poor

Tip: The full routine takes under 30 seconds per shower session.

Weekly Bathroom Glass Reset

- Inspect glass panels for early-stage mineral spotting
- Wipe glass with a damp microfiber cloth to remove surface residue
- Check squeegee blade for nicks, cracks, or stiffness
- Rinse suction cup or adhesive mount - check hold strength
- Wipe down shower frame, door seals, and bottom track
- Check grout lines and sealant for early mould signs
- Ventilate bathroom thoroughly after cleaning

Tip: A consistent weekly reset prevents monthly deep cleans from becoming necessary.

Monthly Hard Water Inspection Sheet

- Check glass panels for clouding, haziness, or white mineral film
- Apply a bathroom descaler if mineral deposits are visible
- Allow descaler to dwell per manufacturer instructions, then rinse
- Re-squeegee glass after descaling to remove all residue
- Inspect squeegee blade - replace if cracked, stiff, or streaking
- Clean bathroom extractor fan grille to maintain airflow
- Check under-sink cabinet and shower tray for moisture or mould
- Inspect silicone sealant around glass panels for gaps or discolouration

Tip: Monthly descaling is the most important step in UAE hard water bathrooms.

Shower Glass Maintenance Calendar

- Daily - Squeegee after every shower, rinse blade, ventilate
- Weekly - Microfiber wipe-down, blade inspection, grout check
- Monthly - Descale glass, replace blade if worn, fan grille clean
- Quarterly - Full bathroom deep clean, sealant inspection, mount check
- Annually - Replace squeegee unit if blade is non-replaceable

Bathroom Ventilation Checklist

- Extractor fan is switched on during and after every shower
- Fan runs for at least 10 minutes after shower ends
- Fan grille is free from dust buildup (check monthly)
- Bathroom door is left slightly open if fan is low-powered
- No damp towels stored permanently inside the shower enclosure
- Shower curtain or door is left open after use to allow airflow
- Windows opened where available during and after shower use

Tip: Poor ventilation is the primary cause of mould in UAE apartment bathrooms.
